

Exp-8: GAS SENSOR MQ-2 IN PROTEUS USING ARDUINO

1) Before Running the code:

2) Source Code

```
#define MQ2_SENSOR A0
```

```
#define GREEN_LED 13
```

```
void setup()
```

```
{
```

```
  pinMode(GREEN_LED, OUTPUT);
```

```
  pinMode(MQ2_SENSOR, INPUT);
```

```
  Serial.begin(9600);
```

```
}
```

```
void loop()
```

```
{
```

```
  int gasValue = analogRead(MQ2_SENSOR);
```

```
  Serial.print("MQ-2 Gas Value: ");
```

```
Serial.println(gasValue);
```

```
if (gasValue > 600)
```

```
{
```

```
    digitalWrite(GREEN_LED, HIGH);
```

```
}
```

```
else
```

```
{
```

```
    digitalWrite(GREEN_LED, LOW);
```

```
}
```

```
delay(500);
```

```
}
```

3) After Simulation
