

Exp-10: PIR SENSOR IN PROTEUS USING ARDUINO

1) Before Running the code:

2) Source Code

```
int Status = 13; // Digital pin D6
int sensor = 12; // Digital pin D7

void setup() {
  Serial.begin(9600);
  pinMode(sensor, INPUT); // declare sensor as input
  pinMode(Status, OUTPUT); // declare LED as output
}

void loop() {
  long state = digitalRead(sensor);
  Serial.println(state);
  if(state == HIGH) {
    digitalWrite (Status, HIGH);
    Serial.println("Motion detected!");
    delay(1000);
  }
}
```

```

}

else {

digitalWrite (Status, LOW);

Serial.println("Motion absent!");

delay(1000);

}

}

```

3) After Simulation
